# Living with Ovarian Cancer - A Quick Guide

---

---

## Contents

This is a brief summary of the information on Living with ovarian cancer from our website. You will find more detailed information on the website.

In this information there are sections on

- Coping with ovarian cancer
- Recovering from ovarian cancer surgery
- Living with advanced ovarian cancer
- Questions for your doctor about living with ovarian cancer
- Ovarian cancer organisations

---

## Coping with ovarian cancer

It can be very difficult coping with a diagnosis of cancer both practically and emotionally. You may feel very upset and confused at first.

As well as coping with the fear and anxiety that a diagnosis of cancer brings, you have to work out how to manage practically. There may be money matters to sort out. Who do you tell you have cancer? There may be children or grandchildren to consider.

The coping with cancer section on the website contains lots of information you

may find helpful including information about counselling, financial issues and much more.

## Recovering from ovarian cancer surgery

It takes time to recover physically and emotionally from cancer surgery. This is particularly true if you have had your womb and ovaries removed. When you go home from hospital, be prepared to take it very easy for the first couple of weeks. You should be able to start driving again anytime from a month after your surgery. But this is very individual. Do talk to your surgeon about your recovery period. And don't feel you should be back to normal if you don't feel like it. You should check your car insurance policy before you drive as some companies will not insure drivers for a number of weeks after surgery.

If you have not yet had your menopause and you have both ovaries removed, your treatment will bring on an early menopause. This can cause symptoms such as hot flushes, sweats, dry skin and dry vagina, tiredness, feeling emotional, thinning bones, anxiety and loss of confidence. These menopause symptoms can be quite intense because your ovaries have been suddenly removed, rather than you going into menopause naturally over a longer period

of time. You may be able to take hormone replacement therapy (HRT) to help with some of the symptoms. You can discuss the pros and cons with your surgeon or cancer specialist.

After a hysterectomy, you will no longer be able to become pregnant. And you won't have any more periods. Even if you were past your menopause before the surgery, losing your womb can be a very emotional experience. Many women find this more of a shock than they expected.

There is more about how cancer treatment can affect your sexuality and your sex life in the sex and cancer section of our website.

### Living with advanced ovarian cancer

Finding out that you have an advanced cancer when you are diagnosed, or that your cancer has come back, can be devastating. At first, you are likely to have some powerful emotions.

If you have advanced ovarian cancer, it may not be possible to cure it. Advanced ovarian cancer means the cancer has spread from where it started in the ovary or has come back some time after you were first treated. Even if your cancer can't be cured, there are treatments available that can slow it down and help control your symptoms. It may be possible to shrink it and put it into remission for quite a while.

It is important that you feel as well as you possibly can. If you haven't already been referred, ask your hospital doctor or GP about seeing a symptom control (or palliative care) nurse. They can help control your cancer symptoms and improve the quality of your life physically. Many have

counselling training and can help you work through some of the emotions you are experiencing.

If you are having difficulties coping at home, your palliative care nurse or a district nurse can talk to you about ways you may cope more easily

### Questions for your doctor about living with ovarian cancer

- How long will it take to get back to normal after my surgery?
- How will my cancer treatment affect my day to day life?
- When can I go back to work?
- Can I take up my usual sports, hobbies and activities again?
- How will my surgery affect my sex life?
- Will I have menopausal symptoms after my surgery?
- How long will they go on?
- What is your view on my taking HRT?
- How can I deal with menopausal symptoms if I don't take HRT?
- Where can I get help dealing with my feelings?
- Do I have to pay for counselling?
- What practical help is available?
- Can I get help with money?
- Can anyone help me with claiming benefits?
